

reflecta x10-Scan

With the **reflecta x10-Scan** slides and negatives can be digitized in no time.

The 14-megapixel CMOS sensor ensures the highest image quality and enables short scan times of less than two seconds.

The scanner comes with an 8.9 cm large LCD monitor and thus allows a comfortable viewing and selecting of the scanned images.

The images are saved as JPEG files directly on an SD card. A TV-Cable (included) also allows playback on televisions.

This makes the reflecta x10-Scan as a stand-alone device **completely independent of computers and software.**
